

# Engineered Mammalian Cell-Cell Communication Mediated by Synthetic Exosomal Cargoes

North American Regional  
10/5/13

# Outline

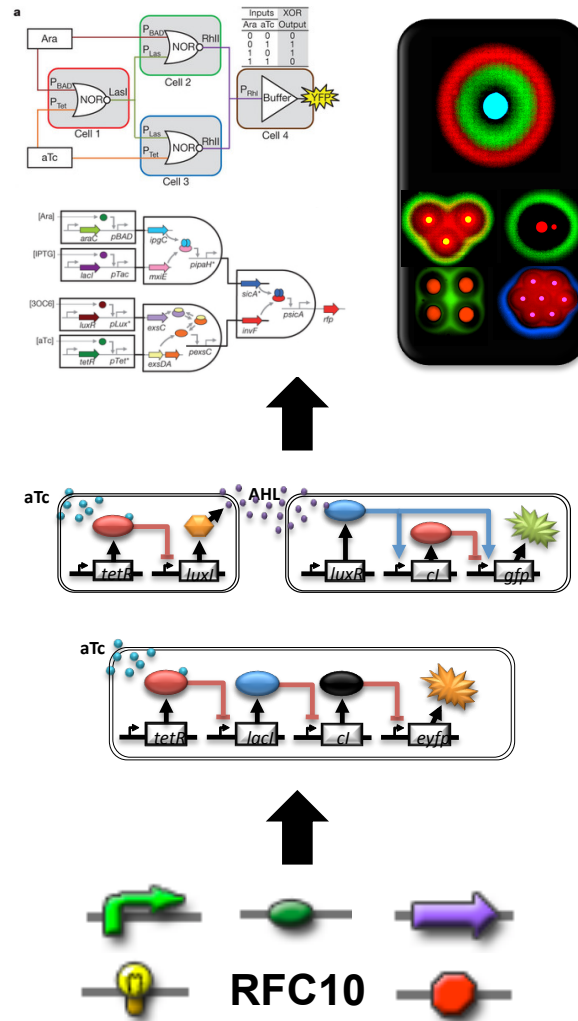

1. Introduction: Cell-cell communication with exosomes
2. Engineered miRNA-based cargo and results
3. Engineered protein-based cargo and results
4. Application to endogenous gene activation and results
5. Impact and human practices

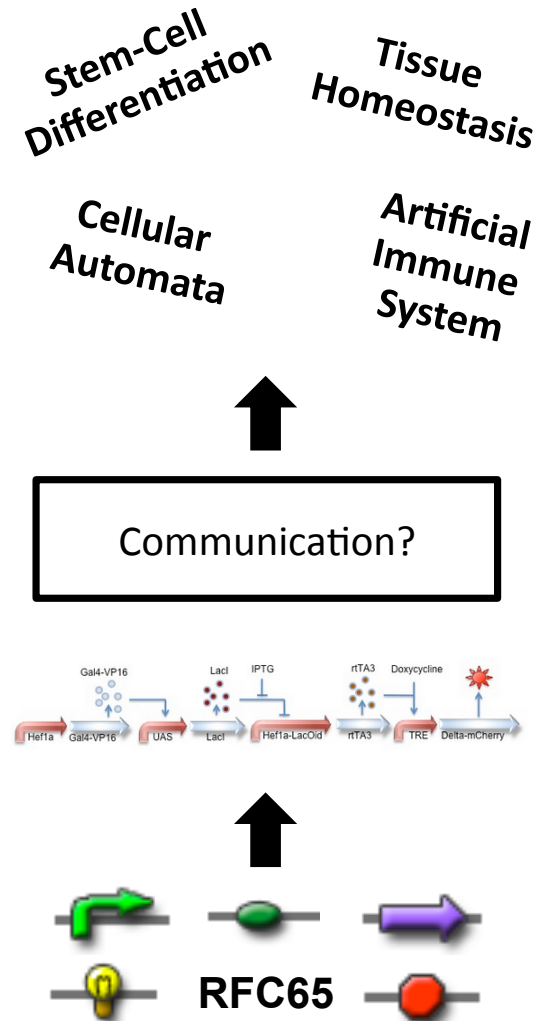

# Bottom-Up Composition in Synthetic Biology

## Prokaryotic

## Mammalian

Basu et al, Moon et al, Tamsir et al, iGEM

# Cell-Cell Communication in the Literature

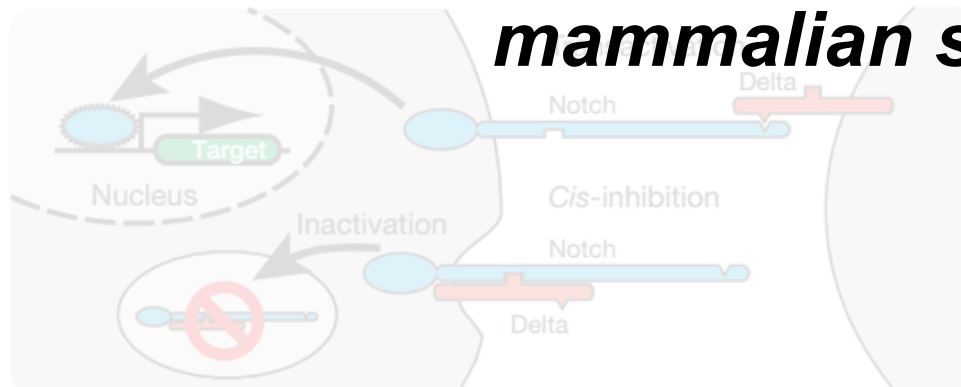

Diffusible molecule

Ability to Engineer

Not orthogonal to cell

Not generalizable

**Aim: Engineer a scalable, tunable cell-cell communication system capable of short to long range signaling in mammalian systems.**

Receptor binding

Ability to Engineer

Cross talk from delta/notch

Requires cell contact

# Engineering Exosomes for Communication

**Mammalian Cell**

**Exosomes**

# Engineering Exosomes for Communication

**Naturally formed and secreted**  
**Choice of cargo**  
**Shown to be uptaken by cells**

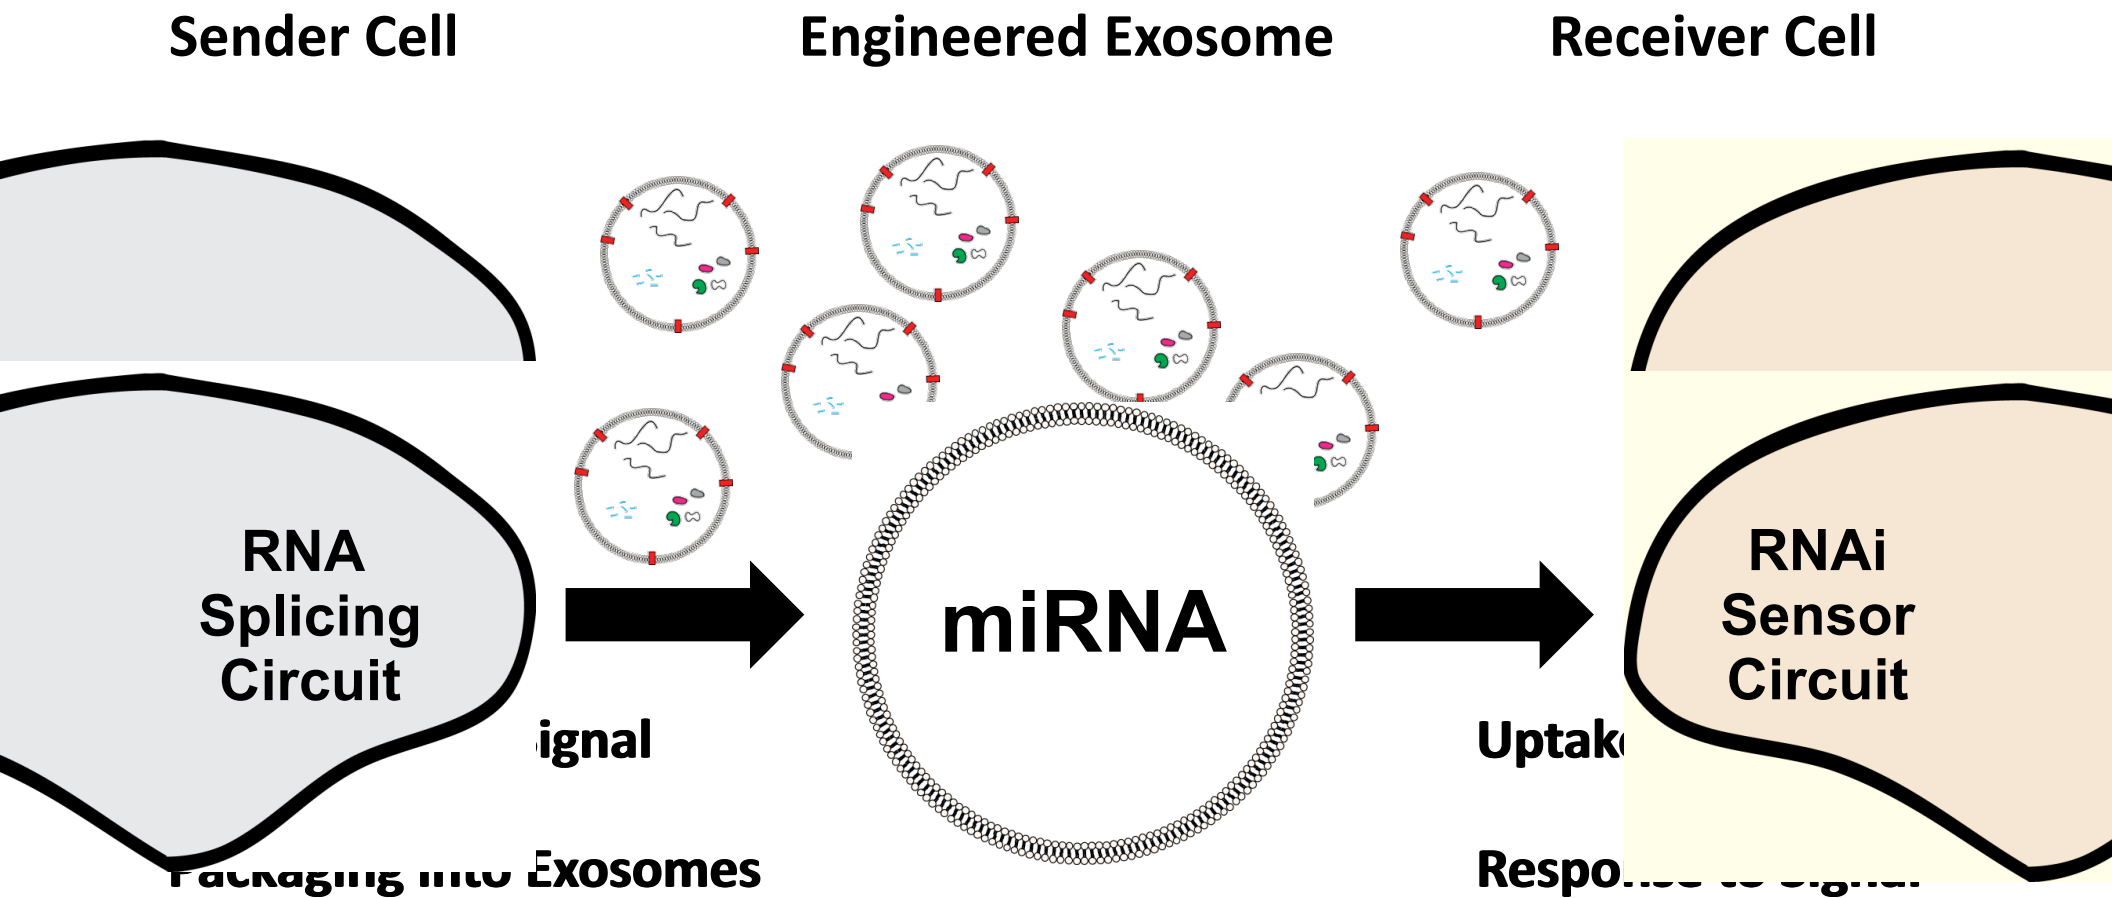

# Outline

1. Introduction: Cell-cell communication with exosomes
2. Engineered miRNA-based cargo and results
3. Engineered protein-based cargo and results
4. Application to endogenous gene activation and results
5. Impact and human practices

# Design and Implementation Considerations

# Receiver Cell Circuit Testing

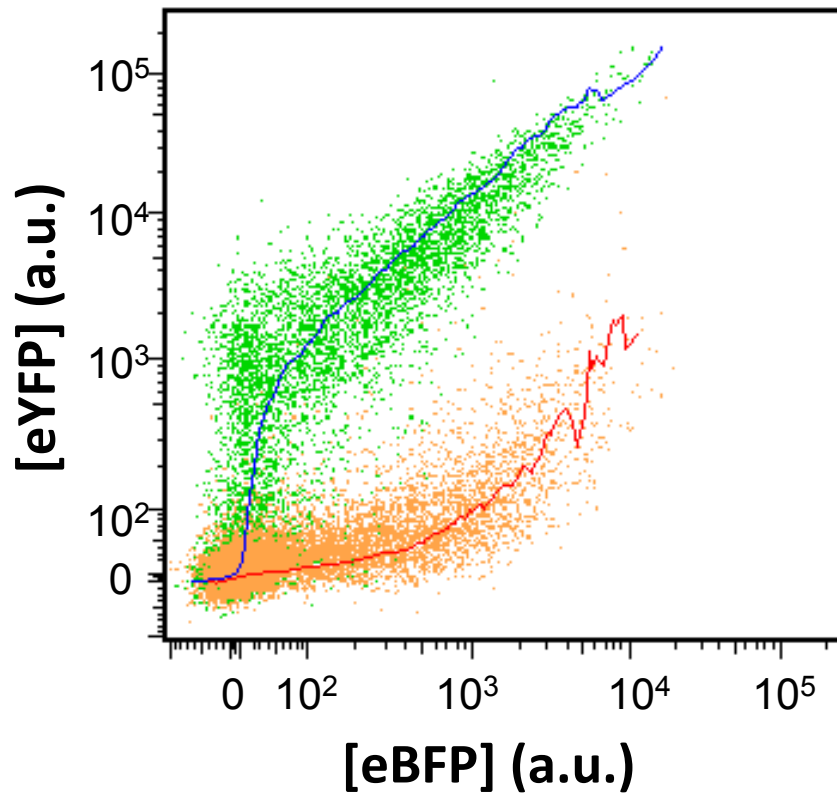

miRNA-451

Input miRNA-451	Output eYFP
0	1

# Exogenous Input Testing of Receiver Circuit

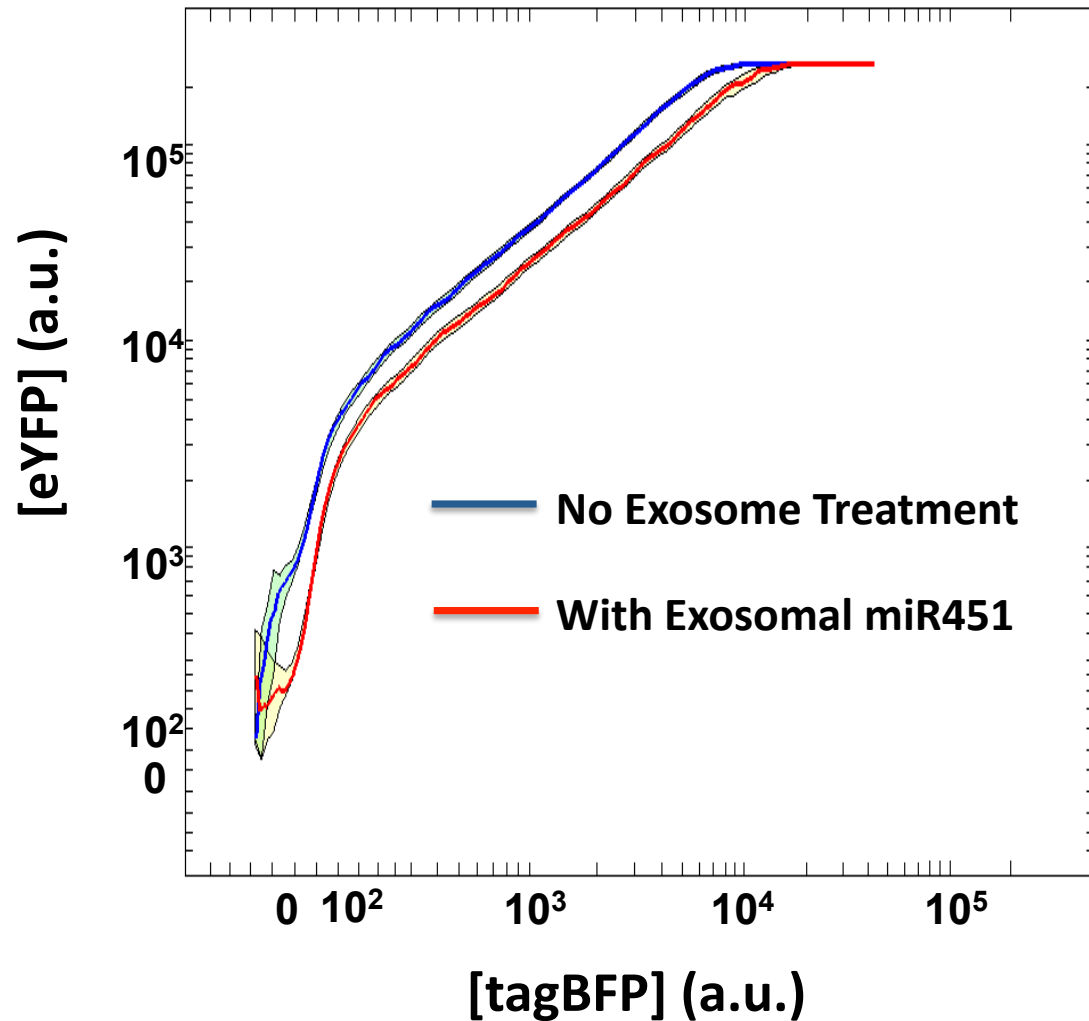

- siRNA 503
- siRNA 451
- siRNA 503 Median
- siRNA 451 Median

siRNA-503

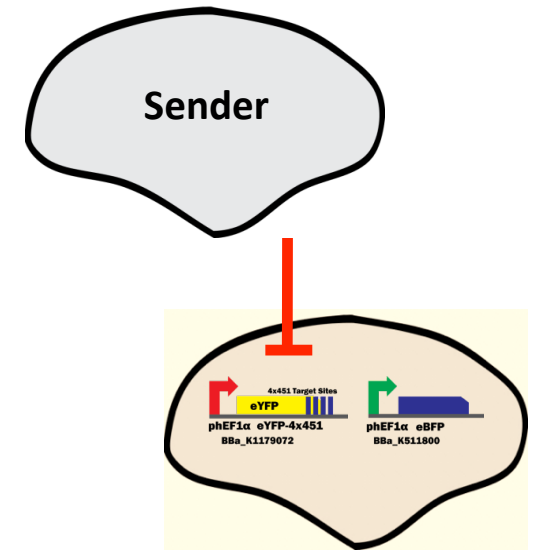

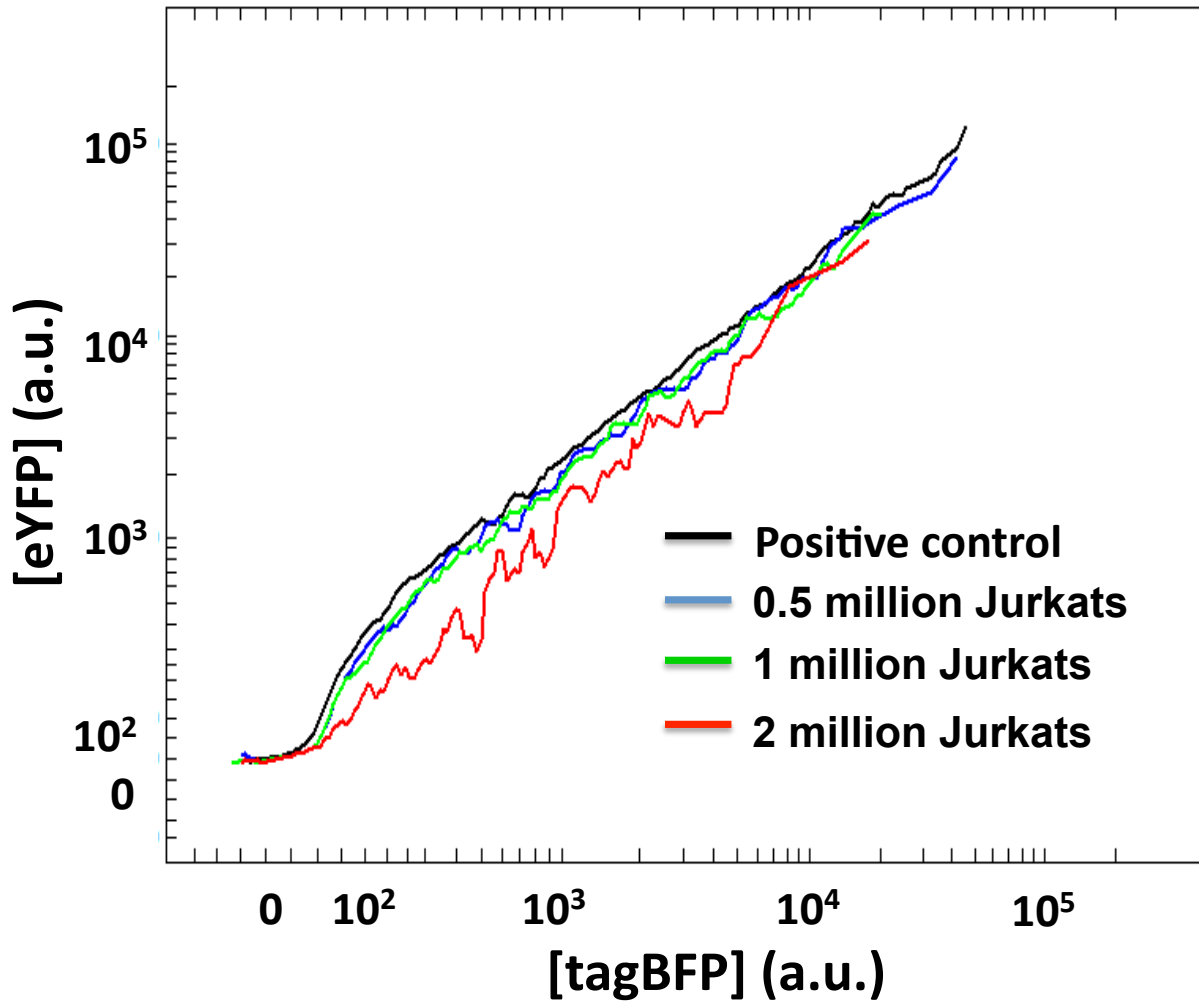

Input miRNA-451	Output eYFP
0	1

# Exosomal Input Testing of Receiver Circuit

Input miRNA-451	Output eYFP
0	1

# Testing of Integrated Cell-Cell Communication System

Input miRNA-451	Output eYFP
0	1

# Outline

1. Introduction: Cell-cell communication with exosomes
2. Engineered miRNA-based cargo and results
3. Engineered protein-based cargo and results
4. Application to endogenous gene activation and results
5. Impact and human practices

# Engineering Exosomes for Communication

**Ability to Engineer**

**Targeting mechanism not understood**  
**miRNA crosstalk problems**

**Ability to Engineer**

**Orthogonal proteins available**  
**Known targeting motif – Acyl-TyA**

# Acyl-TyA Targeting

Rh-PE (Red)

Green: GFP

Blue: NucBlue

Red: Rh-PE

Blue: NucBlue<sup>15</sup>

# Acyl-TyA Targeting

Green: GFP

Blue: NucBlue

Red: Rh-PE

# Acyl-TyA Targeting

Green: GFP

Blue: NucBlue

Red: Rh-PE

# Acyl-TyA Export

Control Primary Antibody: anti-GAPDH (green)  
Experimental Primary Antibody: anti-HIS (red)

HEK  
Cell Lysate

HEK Cell  
Media

# Outline

1. Introduction: Cell-cell communication with exosomes
2. Engineered miRNA-based cargo and results
3. Engineered Protein-based cargo and results
4. Application to endogenous gene activation and results
5. Impact and human practices

# Circuit design for Cas9-VP16 mediated activation

# Cas9-VP16 mediated activation of EYFP

Different concentration of gRNA cause various degree of EYFP activation

# Next Steps

1. Integrate the two parts of our project by creating Cas9-Acyl-Tya and exosomally communicate Cas9.
2. Choose target endogenous genes to target in non-engineered receiver cell.
3. Pursue end applications and their human practices implications.

# Outline

1. Introduction: Cell-cell communication with exosomes
2. Engineered miRNA-based cargo and results
3. Engineered Protein-based cargo and results
4. Application to endogenous gene activation
5. Impact and human practices

- 1) BioBricked mammalian cell-cell communication parts now available for novel mammalian systems.

- 2) Toolkit for engineering therapies based on exosomal remote control, including new cancer vaccines, antiviral resistance, and cell therapies.

- 3) The ability to build new systems will lead to advanced scientific understanding of how natural exosomal systems function.

# Community engagement

High school outreach and lecture

Mentoring HS student team member

Student-led course simulcast to UAI Chile

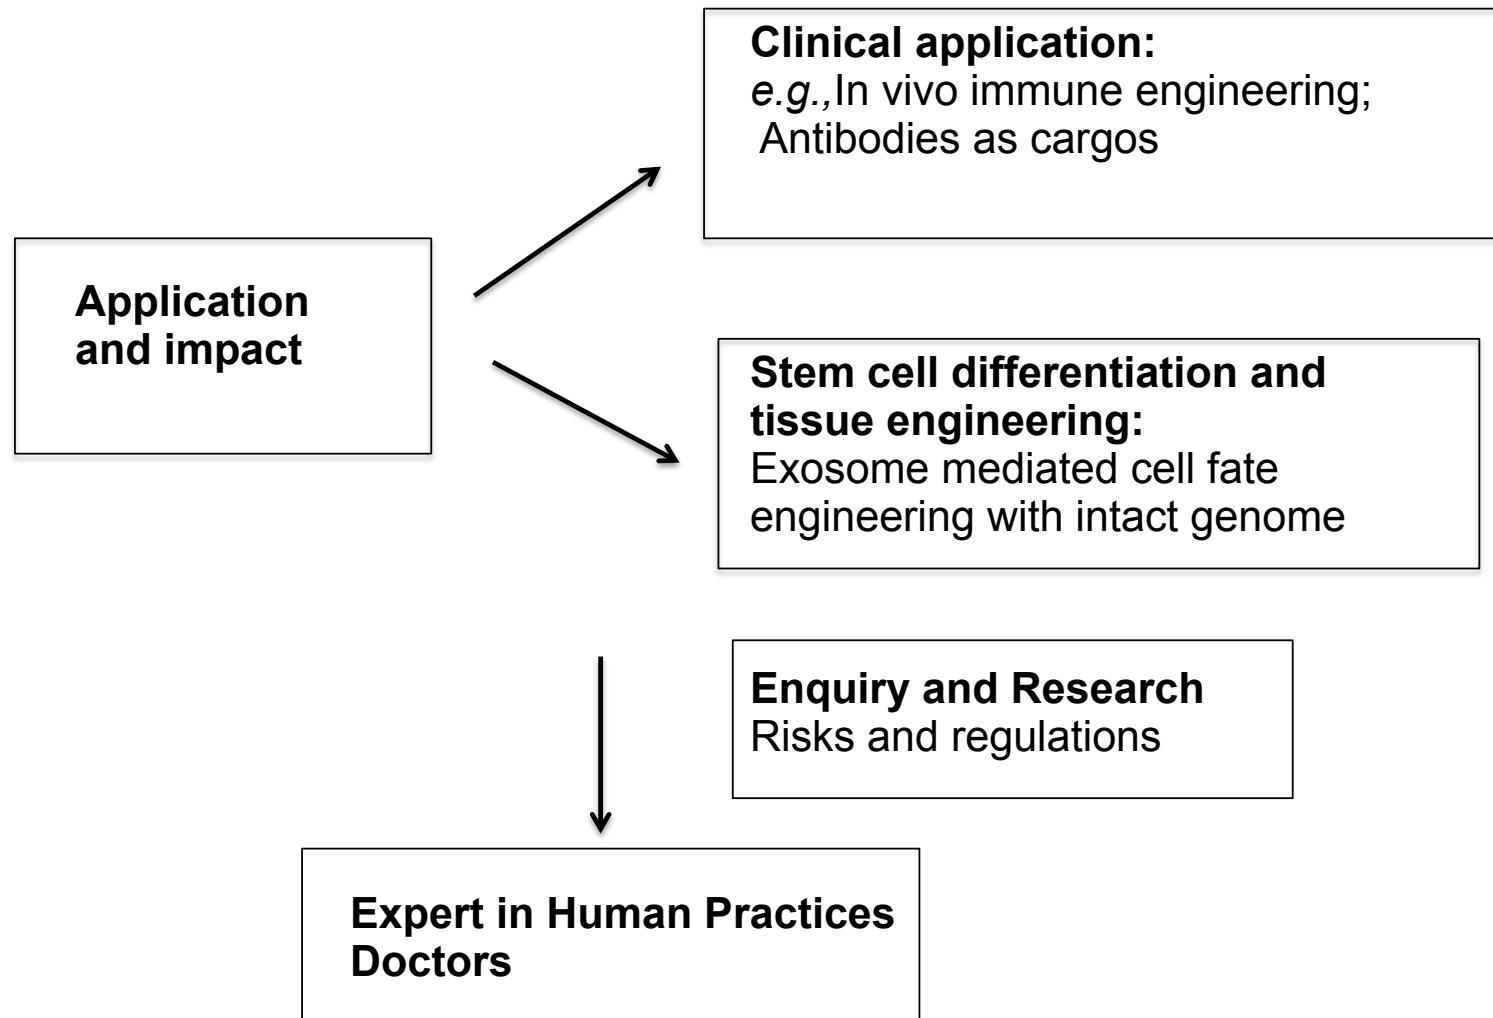

Museum of Science.

Outreach to museum  
Planning SB exhibit

Met with MDs and human practices experts early to guide research direction

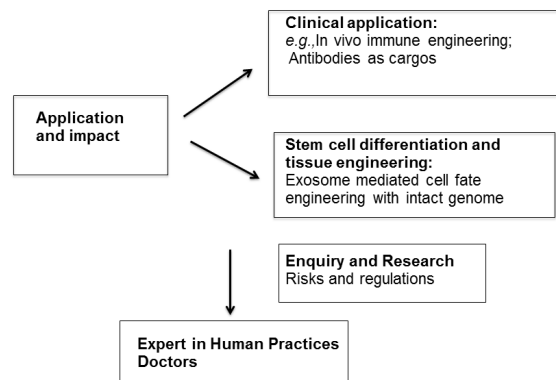

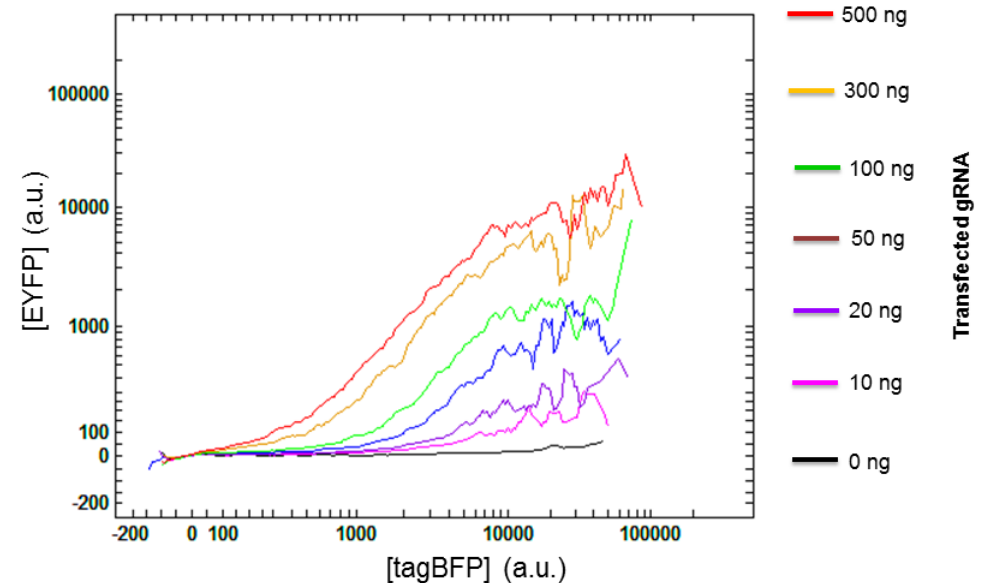

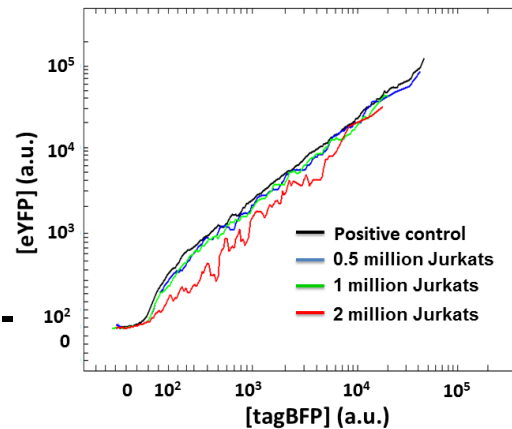

# Integrated human practice approach

# Summary of Accomplishments

1. Addressable miRNA based cell-cell communication system
2. Localized protein-based cell-cell communication system
3. Endogenous gene activation application
4. Novel integrated human practice approach

# Acknowledgments

## 2013 MIT iGEM Team
